**FUYAO AFTERMARKET REPLACEMENT WINDSHIELDS ARE COMPLIANT WITH ADAS  
AS OEM WINDSHIELDS**

Fuyao Glass Industry Group Co., Ltd. proudly announces that Fuyao aftermarket replacement windshields (“ARG”) are as compliant with Advanced Driver Assistance Systems (“ADAS”) as OEM windshields.

As a leading auto glass supplier in OEM and ARG markets, Fuyao is committed to product innovation and customer satisfaction by supplying high quality windshields with the most advanced technology. ADAS is a rapidly growing auto system that provides better driving experiences with blind spot monitoring, lane departure warning, collision risk detection, adaptive cruise control, automated braking, automatic lighting and other automated and safety enhancement functions. Fuyao is pleased to offer ADAS compliant windshields to both ARG and OEM customers.

Fuyao supplies ADAS compliant windshields for both ARG market and OEM market on the same manufacturing standards. Fuyao applies quality materials, strict manufacturing process and equipment and high standards to the manufacturing of its OEM windshields and ARG windshields. Most importantly, Fuyao applies the same set of vigorous quality examination to ADAS-compliant windshields for delivery to its OEM and ARG customers.

Fuyao identifies its ADAS compliant windshields with an ADAS-compliant label and a calibration warning. End-user car drivers are reminded that in order for the ADAS to operate safely and properly, a careful and thorough calibration by a qualified technician is required after each installation of an ADAS-compliant windshield on a vehicle, whether it is an original or a replacement installation. The primary purpose of calibration is to ensure correct alignment among ADAS’ multiple data sources, including camera, laser, radar and computerized imaging systems.
