**VITRO AFTERMARKET REPLACEMENT WINDSHIELDS ARE COMPLIANT WITH ADAS AS  
OEM WINDSHIELDS**

As a leading OEM and ARG manufacturer, Vitro Automotive Glass promises superior quality of glass and breakthrough innovation with the use of latest technology.

Vitro Automotive is pleased to announce that Vitro Automotive Aftermarket replacement glass windshields (ARG) are compliant with advanced driver assistance systems (“ADAS”). ADAS specifications helps to improve the quality of driving with blind spot monitoring, lane departure warning, collision risk detection, adaptive cruise control, automatic lighting, automatic safety enhancement functions and automatic braking and vitro promises to commit to the use of ADAS in their windshields.

At Vitro, we use best in the market manufacturing processes and all our products go through quality assurance check. Vitro, being a leading manufacturer of glass, all our raw materials are superior quality as well. Vitro automotive ARG windshields are produced at the similar manufacturing standards of OEM windshields and are ADAS compliant and our quality check is similar for ARG and OEM.

We are working to add a label to our windshields stating the ADAS compliance and calibration warning. Car drivers (consumers) are hereby informed that for ADAS to operate at appropriate safety levels, a careful and complete calibration needs to be completed by a qualified and preferably experienced technician after each installation of an ADAS compliant windshield on the vehicle. Calibration is useful to correct the alignment among ADAS multiple data sources including laser, camera and radar and computerized imaging systems.
